600-Server Consolidation and 50% Faster Processing Without Added CAPEX

Role scope: LATAM IT Manager / Service Delivery · Infrastructure optimization · Financial discipline · Regional continuity

~600	50%	0
SERVERS CONSOLIDATED	FASTER PROCESSING	ADDITIONAL CAPEX

SITUATION

The organization operated hundreds of servers and business-critical processing that required greater efficiency, lower complexity and better use of existing capacity.

ACTION

Led infrastructure consolidation and optimization through workload, capacity and dependency analysis, improving performance without additional capital investment.

OUTCOME

Career-reported results include consolidation of approximately 600 servers and a 50% processing-time reduction without additional CAPEX.

STAKEHOLDERS

Regional and global IT, operations, infrastructure, finance/controlling, business-process owners and technology leadership.

Why this matters for executive leadership

Demonstrates transformation with financial discipline: efficiency, architecture, complexity reduction and measurable operating value without additional CAPEX.

Evidence classification: career-reported professional outcomes. Figures are not presented as independently audited financial or operational assurance.
